

MACRO- COURSE GUIDE

This course guide is designed to provide schools and colleges with detailed information regarding this course which EzyEconomics has designed to provide full coverage of the economics knowledge requirements indicated by the OCR A-level Economics syllabus.

SYLLABUS COVERAGE AND COURSE EFFICACY

The course material explains and assesses all of the learning requirements of the exam board syllabus.

This is also backed up by comprehensive feedback to questions (in screen text or video format), which further re-enforce the syllabus learning requirements.

As it would be very time consuming for schools to view all the videos and assessments included in the micro and macro course (this would take more than 80 hours) we have compiled this guide to provide an efficient basis for initially assessing the efficacy of this course.

The guide may also be used for reference purposes if schools wish to incorporate the service into their scheme of work or on a day-to-day basis throughout the course in order to help guide the setting of activities.

ASSESSING SYLLABUS KNOWLEDGE REQUIREMENTS

If students are directed to complete all of the course assessments, teachers will have the comfort of knowing that syllabus knowledge requirements have been intensively interrogated. This will also identify where any syllabus gaps exist. This is a major difference relative to a traditional textbook.

The end of module assessments assess all explicit syllabus requirements and a range of additional requirements, which we have interpreted as an implied learning requirement of the syllabus. All other assessments assess learning obtained from video lectures. This means they provide an additional measure of syllabus requirements. The assessment style is less challenging as it is attempting to re-enforce learning from the videos and immediately correct any learning gaps.

Access is also provided to various items of extension material, which we feel support the learning required by the syllabus but which are not explicitly detailed in the syllabus.

SKILLS DEVELOPMENT

The nature of the service means that it cannot currently do anything more than showcase key examination skills. It does not replace the crucial interventions of teachers in guiding the development of the graph creation, extended essay writing skills and tackling data response questions.

CONTENT OF COURSE GUIDE

For each unit and end of module assessment we have detailed the following information:

- 1. Learning objective of video lecture**
- 2. Economic terms covered**
- 3. The content covered by each video lecture**
- 4. Relevant details for each question – learning target, learning task and question style.**

Students have access to the EzyLexicon, which currently provides detailed definitions and supplementary information relating to over 800 terms. There is also access to the EzyEconomics video archive (a weekly video blog).
